

Beyond the 60c Feed in Tariff

Get the greatest benefit from your solar system now

- 1 The NSW 60 cent / kWh Solar Bonus Scheme ends on 31st December 2016
- 2 A number of options are available to maximise your solar investment
- 3 Everyone's circumstances are different – prepare early to avoid the rush!

Your Solar System

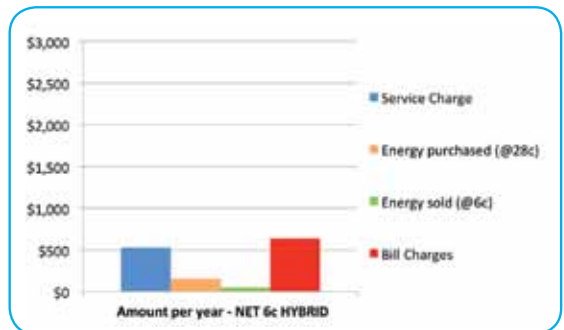

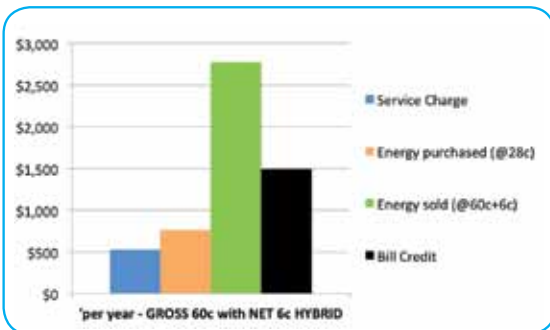

BASED ON 3KW SOLAR 15KWH/DAY CONSUMPTION

2016: (NOW) GROSS 60c

2017: (DO NOTHING) NET 6c

Your Solar System & a Hybrid Battery Storage Solution

UPGRADE NOW (2016) HYBRID – 3KW SOLAR @ 60c GROSS, ADD 2KW SOLAR @ 6c NET, 15KWH/DAY CONSUMPTION, 7KWH BATTERY

UPGRADE LATER (2017) HYBRID – 5KW SOLAR (3KW + 2KW) @ 6c NET, 15KWH/DAY CONSUMPTION 7KWH BATTERY

1 DO NOTHING

- All of your solar energy will be exported to the grid at around 6¢ / kWh
- Household consumption will all be purchased from the grid at around 30¢ / kWh

2 CHANGE YOUR METER FROM GROSS TO NET

- Your solar energy will be used first to power your home during the day reducing your consumption charges
- Surplus energy will be exported to the grid at around 6¢ / kWh
- The cost of having your meter changed is \$350 for single phase or \$550 for poly phase
- There is expected to be strong demand for meter changes at the end of 2016

3 CHANGE YOUR METER TO A SMART METER

- This works in the same way as a NET meter, but adds communication and the ability to see your electricity usage data. Note: Only works in mobile phone service areas
- These meters can be remotely switched from GROSS to NET at the end of the year
- Depending on your retailer, there may be additional daily charges for smart meters

4 INSTALL A HYBRID SOLAR STORAGE SYSTEM

- Store your excess solar energy and use it at night time. Rather than export solar energy at 6¢, save 28¢ per kWh
- Have your net meter installed now along with your hybrid storage solution
- If you have a small solar system currently, add additional solar and battery storage now – benefit today while still maintaining the 60¢ feed in tariff. Connection of your existing gross system to the batteries at the end of the year is as simple as changing 1 wire

5 GO COMPLETELY OFF GRID & HAVE NO NEED FOR A METER!

- Total energy independence.
- If you have a small solar system, add more solar and batteries now running the majority of your home off grid. At the end of the year, switch the other across and permanently disconnect!
- If you have a large system now, you may be ready to go off grid just by adding batteries & inverter

ENERGY FREEDOM SOLUTIONS™

Beyond the 60c Feed in Tariff Options

If you are interested in expanding your solar system, adding batteries, having your meter changed or if you want to go completely off grid, contact us now to learn about our Energy Freedom Solutions and receive a free quote.
